Church of England Primary Schools**

Calculations Policy

Last Review Date:

May 2009	January 2015			
----------	--------------	--	--	--

As a Church of England School this policy is read within the context of the Christian values and teachings of our school.

INTRODUCTION

The National Curriculum for Mathematics (2014) provides a structured and systematic approach to the teaching of calculation. It provides a step-by-step approach to the teaching and learning of the four operations.

Within The Federation of The Downs and Northbourne CEP Schools we have developed a consistent approach to the teaching of calculation methods, in order to establish continuity and progression throughout the school. The policy is based on national expectations from the National Curriculum for Mathematics (2014) but has additional steps inserted where we consider it to be useful.

Aims:

Children should be able to choose an efficient method, mental, written or calculator appropriate to the given task.

By the end of Year 6, children working at an age appropriate level, will have been taught, and be secure with, a compact standard method for each operation.

General Progression:

- Establish mental methods, based on a good understanding of place value.
- Develop use of number lines, hundred squares and other versatile manipulatives to aid mental calculations.
- Use of informal jottings to aid mental calculations.
- Develop use of empty number line to help mental imagery and aid recording.
- Use partitioning and recombining to aid informal methods.
- Introduce expanded written methods.
- Develop expanded methods into compact standard written form.

Before carrying out a calculation, children will be encouraged to consider:

- Can I do it in my head? (using rounding, adjustment)
- The size of an approximate answer (estimation)
- Could I use jottings to keep track of the calculation?
- Do I need to use an expanded or compact written method?

When are children ready for written calculations?

Addition and subtraction:

- Do they know addition and subtraction facts to 20?
- Do they understand place value and can they partition numbers?
- Can they add three single digit numbers mentally?
- Can they add and subtract any pair of two digit numbers mentally?
- Can they explain their mental strategies orally and record them using informal jottings?

Multiplication and division:

- Do they know the 2, 3, 4, 5 and 10 times tables?
- Do they know the result of multiplying by 1 and 0?
- Do they understand 0 as a place holder?
- Can they multiply two and three digit numbers by 10 and 100?
- Can they double and halve two digit numbers mentally?
- Can they use multiplication facts they know to derive mentally other multiplication facts that they do not know?
- Can they explain their mental strategies orally and record them using informal jottings?

These lists are not exhaustive but are a guide for the teacher to judge when a child is ready to move from informal to formal methods of calculation.

Vocabulary:

The correct terminology should be used when referring to the value of digits to support the children's understanding of place value.

E.g. $68 + 47$ should be reading 'sixty add forty' and not 'six add four'.

PROGRESSION OF WRITTEN CALCULATIONS	
Lower School	<ul style="list-style-type: none"> • Begin to record in the context of play or practical activities and problems • Develop the use of pictures and mixture of words and symbols to represent numerical activities • Use of standard symbols and conventions (0-9, +, -, =) • Use of versatile manipulatives and jottings to aid mental calculations, number tracks, empty number lines, partitioning <p>(all calculations will be presented horizontally)</p>
Middle School	<ul style="list-style-type: none"> • Continue use of versatile manipulatives and jottings to aid mental calculations • Use of expanded methods for addition and subtraction • Develop use of compact method for addition and subtraction • Use of expanded methods for multiplication and division <p>(calculations presented horizontally and vertically)</p>
Upper School	<ul style="list-style-type: none"> • Continue use of jottings to aid mental calculations • Secure understanding of compact methods for addition and subtraction (develop use with decimals) • Develop use of compact methods for multiplication and division • Effective use of a calculator to support calculations where appropriate. <p>(calculations presented vertically)</p>

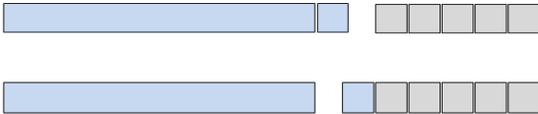

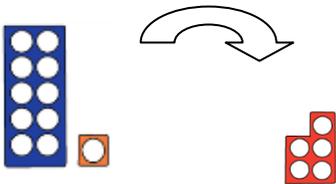

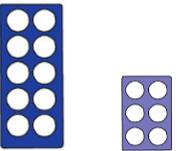

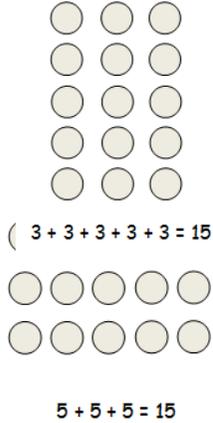

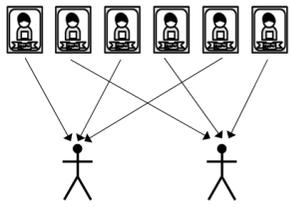

Children should be moved onto the next stage when they are confident and ready to progress.

CALCULATIONS POLICY

STAGE 1

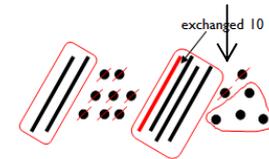

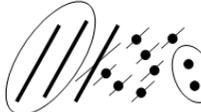

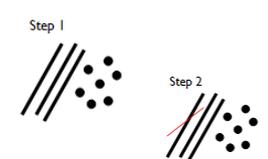

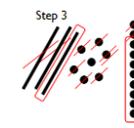

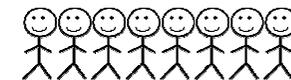

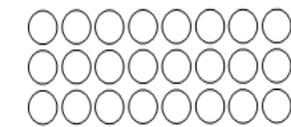

ADDITION	SUBTRACTION	MULTIPLICATION	DIVISION
<div data-bbox="100 240 562 587" data-label="Image"> </div> <p data-bbox="73 624 555 683">Begin to relate addition to combining two groups of objects</p> <ul data-bbox="73 687 573 1114" style="list-style-type: none"> Children are encouraged to develop a mental image of the size of numbers. Make a record in pictures, words or symbols of addition activities already carried out Construct number sentences to go with practical activities Begin by counting all of the items in the groups, then move on to counting on from the largest amount. Relate addition to counting on <p data-bbox="73 1150 555 1241">In practical activities and discussion begin to use the vocabulary involved in addition.</p>	<div data-bbox="633 236 1086 560" data-label="Image"> </div> <p data-bbox="600 592 1151 619">Begin to relate subtraction to 'taking away'</p> <ul data-bbox="600 624 1155 948" style="list-style-type: none"> Children are encouraged to develop a mental image of the size of numbers. Make a record in pictures, words or symbols of subtraction activities already carried out Construct number sentences to go with practical activities Children will subtract two numbers by taking one away from the other and counting how many are left. <div data-bbox="629 979 1160 1086" data-label="Image"> </div> <ul data-bbox="600 1182 1122 1342" style="list-style-type: none"> They learn to think about subtraction as 'take away' in practical, real life situations. They begin to record subtraction number sentences such as $8 - 5 = 3$ <p data-bbox="600 1378 1151 1469">In practical activities and discussion begin to use the vocabulary involved in subtraction.</p>	<p data-bbox="1178 229 1648 288">Count repeated groups of the same size</p> <ul data-bbox="1178 293 1637 619" style="list-style-type: none"> Count in 2's Count in 10's Children are encouraged to develop a mental image of the size of numbers. They learn to think about equal groups or sets of objects in practical, real life situations. They begin to record these situations using pictures. <div data-bbox="1205 651 1406 874" data-label="Image"> </div> <p data-bbox="1429 655 1637 783">A child's jotting showing fingers on each hand as a double.</p> <div data-bbox="1196 979 1406 1145" data-label="Image"> </div> <p data-bbox="1429 986 1637 1145">A child's jotting showing double three as three cookies on each plate.</p>	<p data-bbox="1675 229 2092 320">Share objects into equal groups and count how many in each group.</p> <ul data-bbox="1675 325 2136 587" style="list-style-type: none"> Children are encouraged to develop a mental image of the number system in their heads to use for calculation. They should experience practical calculation opportunities involving equal groups and equal sharing. <div data-bbox="1704 608 2123 746" data-label="Image"> </div> <ul data-bbox="1675 788 2136 979" style="list-style-type: none"> They may develop ways of recording calculations using pictures. CALCULATIONS POLICY

STAGE 6

ADDITION	SUBTRACTION	MULTIPLICATION	DIVISION																																													
<p>This is the final stage of the method, and should be continued to be used for all written addition calculations.</p> $\begin{array}{r} \text{HTU} \\ 625 \\ + 48 \\ \hline 673 \\ \hline 1 \end{array}$ <p>The example above would be 'said' as follows: $5 + 8 = 13$, put 3 down and carry the 10 $20 + 40 + 10$ that was carried over = 70 (7 written in the tens column) $600 + 0 = 600$ (6 written in the hundreds column)</p> $\begin{array}{r} 367 \\ + 85 \\ \hline 452 \\ \hline 11 \end{array} \qquad \begin{array}{r} 321 \\ + 7 \\ \hline 328 \\ + 48 \\ \hline 376 \\ \hline 1 \end{array}$	<p>This final stage is the compact method of decomposition.</p> $\begin{array}{r} 754 \\ - 86 \\ \hline \end{array}$ $\begin{array}{r} 6141 \\ 764 \\ - 86 \\ \hline 668 \end{array}$ <p>This is the final stage of the process and will continue to be used with larger numbers and numbers involving decimals.</p>	<p>Extend written methods, encouraging estimation first</p> <ul style="list-style-type: none"> Grid method (HTU x U) 246×7 <table style="margin-left: 20px; border-collapse: collapse;"> <tr> <td style="border-right: 1px solid black; padding: 2px 10px;">X</td> <td style="border-right: 1px solid black; padding: 2px 10px;">200</td> <td style="border-right: 1px solid black; padding: 2px 10px;">40</td> <td style="padding: 2px 10px;">6</td> </tr> <tr> <td style="border-right: 1px solid black; padding: 2px 10px;">7</td> <td style="border-right: 1px solid black; padding: 2px 10px;">1400</td> <td style="border-right: 1px solid black; padding: 2px 10px;">280</td> <td style="padding: 2px 10px;">42</td> </tr> </table> $1400 + 280 + 42 = 1722$ Grid method (TU x TU) 62×36 <table style="margin-left: 20px; border-collapse: collapse; width: 100%;"> <tr> <td style="border-right: 1px solid black; padding: 2px 10px;">X</td> <td style="border-right: 1px solid black; padding: 2px 10px;">60</td> <td style="padding: 2px 10px;">2</td> </tr> <tr> <td style="border-right: 1px solid black; padding: 2px 10px;">30</td> <td style="border-right: 1px solid black; padding: 2px 10px;">1800</td> <td style="padding: 2px 10px;">60</td> </tr> <tr> <td style="border-right: 1px solid black; padding: 2px 10px;">6</td> <td style="border-right: 1px solid black; padding: 2px 10px;">360</td> <td style="padding: 2px 10px;">12</td> </tr> </table> $1800 + 360 + 60 + 12 = 2232$ For the multiplication of numbers involving decimals children will be taught to multiply the decimal by 10 or 100 as appropriate to remove the decimal point. The calculation can then be undertaken using the grid method and the resulting answer divided by 10 or 100 to put the decimal point back in.
